# RIVER HRMS

## FLOWING WORKFORCE EXCELLENCE

A multi-tenant recruitment platform that combines AI resume analysis, ATS scoring, job matching, interview generation, subscription billing, JWT-secured access, and Google ADK powered voice agents in one product.

AI Resume Analyzer

AI Job Matcher

Interview Generator

ATS Scoring

PDF Parsing

AI Assistive HRMS

JWT Authentication

Razorpay Subscriptions

Google ADK Voice Assistants

### POSITIONING

## From ATS tool to hiring operating system

- Reduce recruiter effort by automating resume intake, scoring, and matching.
- Create differentiated client value with voice assistance and agentic workflows.
- Support unlimited clients with tenant-specific roles, rules, dashboards, and billing.
- Extend from core hiring automation into subscriptions, workflow automation, and enterprise controls when required.

### CORE PROMISE

## Faster shortlisting

Turn raw resumes into ranked, role-fit candidate pipelines.

### BUSINESS VALUE

## Recurring platform utility

Seat-based and workflow-based packaging through subscription tiers.

### ENTERPRISE FIT

## RBAC + multi-tenant

Each client receives its own roles, approval logic, and branded workflows.

### PLATFORM

### DEPTH

## AI extensions

Voice copilots, custom integrations, compliance workflows, and analytics.

Prepared by Neyvin Technologies as a client-facing feature and solution document. Package structure below is indicative and can be adapted per segment.

#### EXECUTIVE SUMMARY

## Why clients buy this platform

### CLIENT PAIN

- Too much recruiter time spent reading resumes that never progress.
- No unified ATS score, fit score, and role-based recommendation engine.
- Hiring managers receive inconsistent interview questions and weak candidate context.
- Finance teams lack subscription visibility and spend governance.
- Large clients need different roles, policies, approval chains, and dashboards.

### RIVER SOLUTION

- Upload resumes in PDF and parse them into structured candidate intelligence.
- Generate ATS scores, role-fit confidence, and recommended job matches automatically.
- Create AI interview question packs tailored to the job, skills, and seniority.
- Secure every user flow with JWT authentication and role-based access control.
- Use Google ADK voice agents and workflow automation to support candidates and internal teams.

Most hiring teams juggle resume uploads, scattered job boards, manual screening, inconsistent interview quality, fragmented approvals, and weak visibility into ROI. RIVER HRMS brings those workflows together into a single operating platform.

#### EXPECTED BUSINESS IMPACT

## Value clients can understand quickly

Position these as business outcomes, not only as technical features. This helps frame the tool as an operating improvement, not just another software screen.

### PIPELINE SPEED

## 2x-4x

Potential reduction in manual resume screening effort when AI triage is fully used.

### DECISION QUALITY

## Higher fit

Score-based shortlisting gives recruiters and managers better shared context.

### USER ADOPTION

## More stakeholders

Recruiting, hiring managers, finance, and candidates all have role-specific value.

### PLATFORM GROWTH

## Expansion-ready

Clients can start with core hiring automation and expand into voice and workflow layers.

## Feature set included in RIVER HRMS

The strongest proposal frames each module as a direct client benefit and an optional future expansion point.

### 1. AI RESUME ANALYZER

- Reads uploaded resumes and extracts key candidate information.
- Normalizes skills, titles, experience, education, and keywords.
- Highlights relevance, gaps, and risk signals for recruiter review.
- Creates a structured base for matching, scoring, and workflow automation.

### 2. AI JOB MATCHER / FINDER

- Matches candidates to jobs based on skills, experience, role context, and preferences.
- Surfaces best-fit jobs for candidates and best-fit candidates for recruiters.
- Improves application quality and reduces irrelevant submissions.
- Supports internal talent mobility and client-side hiring prioritization.

### 3. AI INTERVIEW QUESTION GENERATOR

- Creates role-specific interview packs for technical, functional, and managerial roles.
- Adapts question depth to experience level and business context.
- Improves consistency across interviewers and business units.
- Can be extended into scorecards and interview evaluation templates.

### 4. ATS RESUME SCORING

- Gives every resume an ATS-oriented score against a chosen job description.
- Supports sorting, filtering, and shortlist prioritization.
- Helps candidates understand how to improve their applications.
- Provides transparent scoring signals for enterprise review teams.

### 5. PDF RESUME UPLOAD & PARSING

- Acts as the core input channel for candidates and recruiters.
- Converts raw documents into searchable, reusable candidate records.
- Feeds every other AI feature with structured data.
- Can later support bulk upload, email ingestion, or API intake.

### 6. AUTHENTICATION, BILLING, AND UI LAYER

- JWT-secured authentication for safe, scalable session handling.
- Razorpay subscriptions for recurring billing, plan upgrades, and retries.
- Modern Tailwind-based interface for desktop and mobile role-based dashboards.
- Strong subscription-ready foundation for SaaS growth and enterprise trust.

## End-to-end employee operations from joining to exit settlement

In addition to recruiting, RIVER HRMS can be positioned as a complete AI-assisted HRMS layer covering the employee lifecycle from onboarding through payroll, performance, attendance, and full and final settlement.

### 1. JOINING AND ONBOARDING

- Offer acceptance workflow, document collection, and joining checklist.
- Digital employee file creation, policy acknowledgment, and induction scheduling.
- AI assistant for answering onboarding questions and nudging pending actions.
- Department-wise provisioning tasks for HR, IT, finance, and reporting managers.

### 2. ATTENDANCE, LEAVE, AND SHIFT OPERATIONS

- Attendance tracking, shift planning, holiday calendars, and location-aware policies.
- Leave request routing, manager approval rules, and absence visibility.
- AI alerts for anomalies, late patterns, attendance exceptions, and policy breaches.
- Operational dashboards for daily workforce visibility.

### 3. PAYROLL AND STATUTORY PROCESSING

- Payroll inputs, salary structures, reimbursements, deductions, and payslip generation.
- Compliance-ready workflow support for recurring payroll operations and finance review.
- AI assistant for payroll queries, missing inputs, and exception tracking.
- Seamless visibility between HR operations and finance stakeholders.

### 4. KPI, PERFORMANCE, AND REVIEW CYCLES

- KPI definition, goal-setting, check-ins, appraisal workflows, and review documentation.
- Role-based performance dashboards for employees, managers, and HR leaders.
- AI-supported summaries for review prep, trend identification, and action follow-up.
- Historical performance visibility across teams and reporting structures.

### 5. EMPLOYEE SERVICES AND HR OPERATIONS

- Employee directory, document vault, letters, policy center, and request management.
- Support for announcements, helpdesk-style requests, and internal communication flows.
- AI assistant for employee self-service and HR query reduction.
- Cross-functional workflows connecting HR, payroll, managers, and finance.

### 6. EXIT, FULL AND FINAL, AND SEVERANCE

- Resignation handling, clearance workflow, asset return, and exit approvals.
- Full and final settlement, severance package workflows, and finance-side validation.
- Knowledge-transfer and offboarding checklists with role-based accountability.
- End-of-employment reporting for HR, finance, and leadership visibility.

# Multi-tenant RBAC + Google ADK orchestration

This is where the product becomes more than a hiring app. It becomes infrastructure for how clients run recruiting at scale.

## MULTI-TENANT RBAC

River supports any number of client organizations. Each client can have different roles, permissions, approval chains, visibility rules, and dashboard experiences.

| Role           | Primary Value                                                           |
|----------------|-------------------------------------------------------------------------|
| Client Admin   | Controls hiring operations, access, plans, and business rules.          |
| Recruiter      | Runs sourcing, screening, scoring, and interview creation.              |
| Hiring Manager | Reviews AI-ranked candidates and approves shortlist decisions.          |
| Finance        | Tracks subscription, seats, invoices, and payment recovery.             |
| Candidate      | Uploads resume, checks fit, and receives interview preparation support. |

## GOOGLE ADK VOICE + AGENTIC WORKFLOWS

- Voice assistant for candidate FAQs, role guidance, and application support.
- Agentic workflows that connect candidates, recruiters, managers, and finance teams.
- Rule-based orchestration so each client can define what happens at every step.
- Human handoff points for approvals, exceptions, and sensitive decisions.
- Suitable for automation-heavy and high-volume client environments.

## RECRUITING WORKFLOW

### Resume to shortlist

Upload PDF, parse profile, score fit, generate shortlist, route to reviewer.

## CANDIDATE WORKFLOW

### Guided application

Voice assistant explains role fit, application progress, and interview preparation.

## BILLING WORKFLOW

### Subscription expansion

Increase plan value with seats, automation packs, voice agents, and custom policy controls.

## PACKAGING OPTIONS

### Recommended packages for client deployment

These tiers help define an entry point while keeping a clear path toward higher-capability enterprise deployment.

#### STARTER

For growing teams

**Rs 25,000,**  
**month**

- PDF resume upload and parsing
- AI resume analyzer
- ATS scoring for core roles
- Basic recruiter dashboard
- JWT authentication and standard support

#### GROWTH

Best fit for serious hiring teams

**Connect  
with sales  
team**

- Everything in Starter
- AI job matcher and candidate recommendations
- AI interview question generator
- Multi-role dashboards and approval workflows
- Razorpay recurring billing and subscription controls
- Advanced analytics and tenant-level policy settings

#### ENTERPRISE

For multi-brand and high-volume hiring

**Connect  
with sales  
team**

- Everything in Growth
- Google ADK voice assistants
- Agentic workflow orchestration across roles
- Custom RBAC, compliance logic, and audit controls
- Dedicated onboarding and integration support
- Premium SLA and expansion consulting

#### RECOMMENDED ADD-ONS

- Voice assistant per client brand or geography
- Custom job-board or HRMS integrations
- Dedicated analytics pack and executive reporting
- White-label branding and custom domain setup
- Advanced compliance workflow and approval matrix

#### RECOMMENDED ADOPTION PATH

- Start with screening efficiency, structured candidate data, and hiring speed.
- Add workflow automation when the client needs more scale and coordination.
- Add voice agents when candidate engagement becomes strategic.
- Add enterprise controls when multiple teams, brands, or approval layers are involved.
- Add analytics and finance visibility when leadership needs ROI clarity.

## Suggested implementation roadmap

This rollout structure helps clients understand how the platform can start delivering value quickly while leaving room for paid expansion phases.

### PHASE 1

#### Foundation

- JWT authentication
- Tenant setup and user roles
- Resume upload and parsing
- Core recruiter dashboard

### PHASE 2

#### AI Decision Layer

- ATS scoring
- Job matching engine
- Interview question generation
- Manager review workflows

### PHASE 3

#### Advanced Platform Layer

- Razorpay subscriptions
- Finance dashboards
- Google ADK voice assistant
- Enterprise workflow automation

### SOLUTION SUMMARY

#### Position River as the hiring system clients can grow into

The strongest story is not "we built an AI feature." It is "we built a hiring operating system" that starts with resume automation and expands into role-based operations, finance control, and AI-native client service.

- Start with the pain clients already feel: screening speed, quality, and visibility.
- Show the near-term gain: resume parsing, ATS scoring, and smarter matching.
- Show the platform depth: subscriptions, workflows, voice agents, and enterprise controls.
- Close on strategic value: River becomes the platform layer for multi-client hiring operations.

Feature set document for RIVER HRMS. Suggested package and implementation terms should be finalized based on target segment, implementation scope, support model, and integration complexity.
